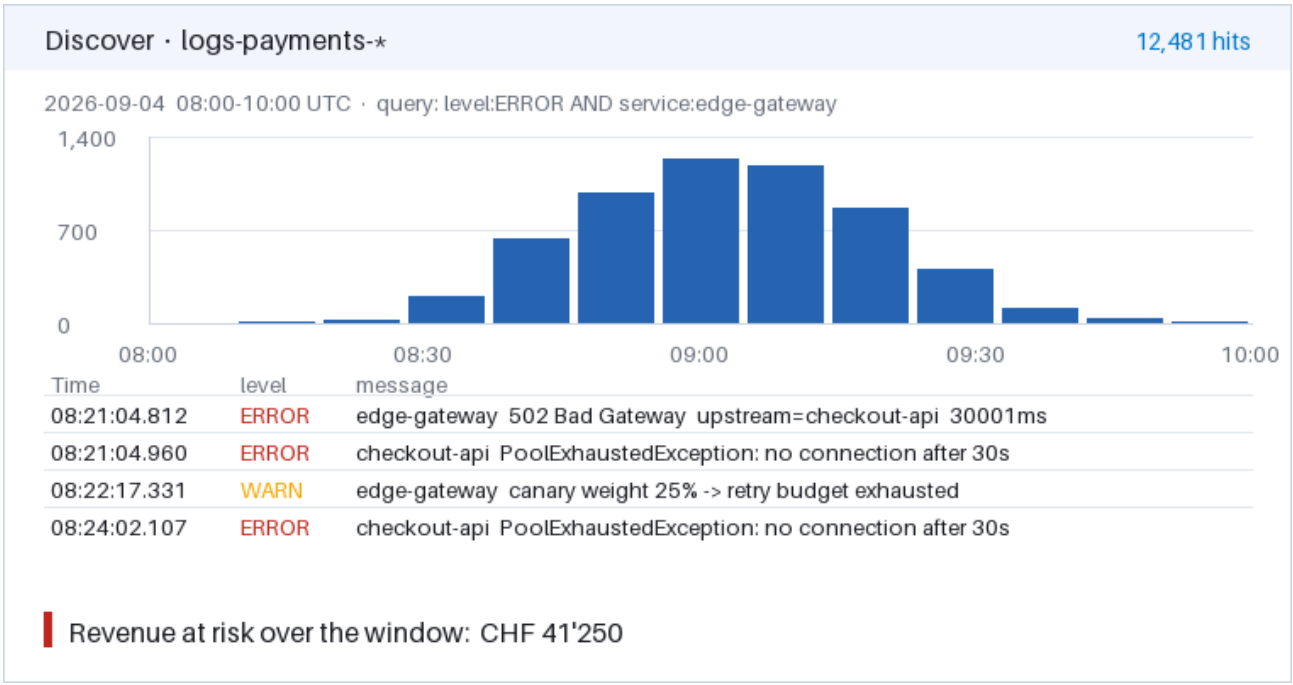
PLAY-3003 -- Edge gateway 502 spike
Document key: PLAY-3003-kibana-error-spike.pdf | page 1 of 1

Severity: critical
Resolved: 2026-09-04
Affected systems: edge-gateway, checkout-api

Root cause: the 25% canary on edge-gateway routed to a build whose upstream timeout was 30 seconds against a client timeout of 10, so every slow checkout call was counted twice and returned 502.


Revenue at risk is shown on the screenshot below and is written nowhere in this note.
